BASKETBALL COURT FLOOR COATING

Project Snapshot

Project Overview:

This unique resinous flooring application was completed at a private residence in the upper midwest United States. Completely seamless, the basketball court was created using HP Spartacote's Sparta-Chip™ PURE system. All materials used in this project were green friendly, containing ultra-low or 0 volatile organic compounds (VOCs) with minimal odor.

Installation:

Following surface preparation, the installer applied a grey base coat of voc-free Sparta-Flex® PURE™ polyaspartic coating, which was immediately broadcast into with a proprietary vinyl chip blend. During the application of the base coat, basketball court lines were taped off and completed using pigmented black and white Sparta-Flex® PURE coatings. Following the removal of excess chip and a subsequent floor scrape, a coat of HP Spartacote's Sparta-Flex® XT top-coat was installed for added durability and wear resistance. Including surface preparation, the basketball court was completed in a 2-day time frame and turned over the following day to the customer.
