TIC KIEWIT INDUSTRIAL FACILITY

Project Snapshot

Started in 1974 in Steamboat Springs, Colorado, TIC is a direct-hire general industrial construction company with annual contract awards of over \$2 billion. A member of Kiewit building group, TIC services a wide range of markets both in the United States and abroad, from heavy industrial (power, mining, industrial process and renewable energy), to environmental water and wastewater treatment, slipform erection, marine and general maintenance services.

When TIC required a new high performance resinous flooring systems for their Steamboat Springs, CO facility they turned to HP Spartacote's high performance polyaspartic coatings. The material needed to be installed quickly to reduce downtime and provide the maximum amount of abrasion and chemical resistance possible. The system selected was a moderate flake broadcast, complete with a company logo and Sparta-Flex XT top-coat. An obvious choice for the top-coat wearing surface, Sparta-Flex XT™ provided the durability required to withstand heavy vehicular and equipment traffic.
