|--------------------------------------|--|
| Ventilation and engineering controls | : Good general ventilation (typically 10 air changes per hour) should be used. Ventilation rates should be matched to conditions. If applicable, use process enclosures, local exhaust ventilation, or other engineering controls to maintain airborne levels below recommended exposure limits. If exposure limits have not been established, maintain airborne levels to an acceptable level. Provide eyewash station. |
| Respiratory protection (type)        | : In case of insufficient ventilation, wear suitable respiratory equipment.  |
| Eye protection (type)                | : Chemical goggles or safety glasses.  |
